Serial No. 545,701

Art Unit 123

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-33, drawn to compounds, classified in Class 564, subclass 336 and class 260, subclass 465.
- II. Claim 34 , drawn to a cyano intermediate compound , classified in Class 260 , subclass 465 .
- III. Claim 35 , drawn to an amide , classified in Class 564 , subclasses 165, 166 and 167 .
- IV. Claim 36, drawn to different processes of making compounds, classified in Class, subclass.

The inventions are separate and distinct, each from the other because of the following reasons:

Inventions IJ-III and I are related as mutually exclusive species in intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP section 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP section 806.04(h)).

In this instant case, the intermediate product is deemed to be useful as pesticides or as intermediates to make other compounds, such as phenyl and cycloalkanol substituted acetic acids and the inventions are deemed patentably distinct since there is nothing on this record to show them to be obvious variants. Should

Serial No. 545,702 Art Unit 128

applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103 of the other invention.

Inventions IV and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make another and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP 806.05(f)). In the instant case claim 36 evidences that the product as claimed can be made by materially different processes.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art and divergent fields of search restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Richard K. Jackson on October 11, 1984 a provisional election was made without traverse to prosecute the invention of I, claims 1--33 and the species recited in claim 4. Affirmation of this election must be made by applicant

Serial No. 545,701 Art Unit 128

in responding to this Office action.

Claims 34-36 stand withdrawn from further consideration by the Examiner, 37 CFR 1.142(b) as being drawn to a non-elected invention.

35 U.S.C. 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

Claims 1-33 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-2 of applicant's copending application serial no. 486,594. This is a double patenting rejection.

Claims 1-3 are rejected under 35 U.S.C. 112, first and second paragraphs, as the claimed invention is not described in such full, clear, concise and exact terms as to enable any person skilled in the art to make and use the same, and/or for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The specification fails to teach the preparation fails to teach the preparation of the compound wherein R5, and/or R6 are cyano and/or nitro. The reduction of the intermediate cyano or amido compounds will also reduce the cyano and nitro groups of R5 and R6.

Any

Serial No. 545,701 Art Unit 128

The recitation of the dotted line to represent "optional unsaturation" is indefinite and broader than the scope of the enabling disclosure. It includes triple bonded moieties which are not intended.

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
